3COM and Daylight Savings Time/patch upgrade..... 3Com has come up with a promotion for the version 6.0 upgrade for users operating R4.2, 4.3, and 5.0 software, as their operating system. 6.0 has various new application features, as the group has discussed in the past..... These include the ability to use SIP in certain circumstances, and a suite upgrade, to those in the call center business..... In a "Partner News" item from Friday February 23 2007, they have announced the following:..... "The 3Com NBX IP Telephony platform software release 6.0 automatically adjusts the time on the NBX's in their network in compliance with the new standards"..... The issue addresses the fact that all the earlier versions are set for the original Daylight Time dates that are now invalid, starting 2007..... An alternate fix to this issue appears various places on this site, and will be supported at no charge by the group... If you are concerned about this issue, call us at 1 800 544 0059, and we will walk you through it at no charge... it does not matter whether you are a member or not, our concern is for the entire NBX community.
