

Can release 6.0 be used in all the 3Com NBX products, the NBX 100, the V3000, and the V5000?

Yes it can, with a caveat. 6.0 is the first revision with this ability to choose a language,(H.323 or SIP). You may only choose one or the other, not both. In addition. 6.0 may not support every function in every series of controller. As an example, if you choose SIP in the NBX 100, you must move your voice mail to free standing server.
