---

Both the boxes will need VTL's which are virtual tie lines. These licenses allow the passing of data both directions , with full security, either for voice or voice and data applications. These licenses are sold in a bundled pair under number 3C10328. The application works well. The drawback is price, as each pair has an MSRP of \$1000. In addition, both systems require an IP on the fly license, which came as a standard feature on some NBX 100's, and later on all V3000 boxes. The good news is that most users are happy with the functionality..
